### ITEM 2. Industry Description

#### 2.1 Industry Overview

The Korean point system has been applied to various industries since the introduction of the airline mileage point system. The airline mileage point system was first introduced in 1984 by Korean Air to Korea. As of 2017, the industry with the most points accumulation was the card company, which accumulated 2,900 billion won, followed immediately by the 692th, the aviation industry, which accumulated 2,600 billion won.

According to the data released by the National Statistical Office and the Korea Consumer Agency, the Korean point market is estimated to be about 20 trillion won as of 2019, and increases by more than 10% each year. According to the Yano Research Group in Japan, the global point market is estimated at around 200 trillion won as of 2018. With the development of the Internet in the early 2000s and the recent e-commerce industry, the point market continues to grow.

#### 2.2 Recent Trends

##### (1) Consolidate points into one platform

Points scattered across multiple platforms are integrated into one platform.

##### (2) Point transfer between users

Ability to transfer points between users.

##### (3) Global mileage system

Points that can be used worldwide.

##### (4) Advertising / Marketing Using Point Ecosystem

Target marketing using accumulated data of point partners.

##### (5) Various ways to use points

Providing various utilization methods with existing points.

#### 2.3 Target Market Size

According to the Yano Research Group in Japan, the global point market is estimated at around 200 trillion won as of 2018. As of 2019, it is estimated to be about 20 trillion won, showing an increase of more than 10% each year. With the development of the Internet in the early 2000s and the recent e-commerce industry, the point market continues to grow.

## 2.4 Target Customers

Any company with a point system.

## 2.5 Competitors

### 2.5.1 Existing Industry Competitors

The following sets forth certain information regarding the company's conventional competitors already established within the industry as of 2020-05-13:

No data available

### 2.5.2 Token Project Competitors

The following sets forth certain information regarding the company's competitors that have implemented Token economics as of 2020-05-13:

#### **MiL.k**

|              |  |
|--------------|--|
| Token Symbol | MLK  |
| Network Type | ETH  |
| Description  | Milk is a blockchain platform that connects service companies in travel/leisure/and lifestyle sectors. It integrates those companies' mileage points into one currency, and the currency is Milk Coin. |

## ITEM 3. Project's Business Model

### 3.1 Business Description

#### 3.1.1 Revenue Model

Assemble Protocol is a project to solve problems in the global point market through blockchain-based global point integration platform.

#### 3.1.2 Platform or Application Overview

##### General platform description

Assemble Protocol, a global point integration platform, is designed to address current point market issues from the perspective of each participant.

It also provides a transparent and safe token ecosystem that utilizes Assemble Protocol blockchain technology to

1) point providers, 2) point consumers, and 3) merchants who participate in the platform.

1) Point provider (enterprise company): It is necessary to secure users to extinguish accumulated debt from the point system and secure channels for inflow of new customers.

2) Point consumer (customer): Customers are provided with a new method of using the point they own.

3) Franchise (individual or enterprise): Additional sales channels are secured and efficient advertising means are provided.

#### Functions of the solution

< Challenges for Point Providers perspective >

- 1) In the point market, point providers are now required to spend additional marketing costs to promote the point system.
- 2) Point providers spend a lot of money every year to maintain the point system to attract the inflow of new customers or to prevent the departure of their customers.
- 3) For point providers, points are incorporated into a company's debt account.

< Challenges Point Customers perspective >

- 1) Consumer's points are often unavailable for services provided by other companies.
- 2) Due to the expiration of the company's point validity period, consumers must spend points within a certain period. This creates a dispute between providers and consumers.

#### User pain points

< Point Market Problem >

1. Point service marketing competition.
2. Excessive use of operating costs to operate the system.
3. Accounting Debt Problems.

< Point consumer Problem >

1. Point system that cannot be concentrated and managed in one place.
2. Absence of use.
3. Point validity limit.

### 3.1.3 Product/Service Line Description

#### - Sta1.com

As a core partner of Assemble, It is Korea's top shopping mall ranking site with over 1,000,000 shopping malls and more than 1,000,000 products as fashion shopping mall search, similar product search, and price comparison.

#### - Clubpass

As a core partner of Assemble, the Clubpass mobile application is in operation. It is actually affiliated with most clubs in Korea. It also has a mobile ticketing patent. Clubpass currently has 220,000 users.

### 3.1.4 Competitive Advantage

There are many users who have already joined Clubpass and Sta1.com, which are affiliated as core partners. In addition, various service partnerships such as YW Mobile will be expanded.

### 3.1.5 Intellectual Property

No Input

## 3.2 Partnerships

### ▶ ORACLE

#### Counterparty Website

<https://www.oracle.com/index.html>

#### Counterparty Description

Oracle Corporation is the world's second-largest software company based in California, United States. The company's flagship product, the database product, Oracle DBMS, occupies the world's best market share. In 2014, Oracle was the second largest software maker by income after Microsoft. On April 20, 2009, Oracle announced that it had acquired the United States' Sun Microsystems, the world's fourth largest computer server company, for \$ 7.4 billion.

### 3.3 Project Progress

#### History

ASSEMBLE Protocol is a global point integration platform based on blockchain.

<Solutions>

< Challenges for Point Providers perspective >

- 1) In the point market, point providers are now required to spend additional marketing costs to promote the point system.
- 2) Point providers spend a lot of money every year to maintain the point system to attract the inflow of new customers or to prevent the departure of their customers.
- 3) For point providers, points are incorporated into a company's debt account

#### Project Status

Pre-development Stage

#### Development of the platform and business operations have been or will be funded through the following sources

Initial token sale(Public and Private)

#### Plan or Strategy to expand platform or token

2019 Q3~Q4

- Team Building
- Build service and application concepts.

2020 Q2

- White Paper Release
- Partnership with Sta1.com
- Partnership with Clubpass

#### 2020 Q3

- Launching an ASSEMBLE Wallet

#### 2020 Q4

- Completed development of ASSEMBLE Point Exchange
- Completed a Marketplace

#### 2021 Q1

- Launching an ASSEMBLE web version (Window / Mac)
- Completed a Plug-In for Partner

#### 2020 Q2

- Launching an ASSEMBLE mobile version

### 3.4 Milestones

| Title                               | Target Date | Status    | Description                            |
