

# Smart Contract Security Audit Report

The SlowMist Security Team received the FET team's application for smart contract security audit of the FET Token on February 18, 2020. The following are the details and results of this smart contract security audit:

**Token name :**

FET

**The Contract address :**

0x1d287cc25dad7ccaf76a26bc660c5f7c8e2a05bd

**Link address :**

<https://etherscan.io/address/0x1d287cc25dad7ccaf76a26bc660c5f7c8e2a05bd#code>

**The audit items and results :**

(Other unknown security vulnerabilities are not included in the audit responsibility scope)

No.	Audit Items	Audit Subclass	Audit Subclass Result
1	Overflow Audit	-	Passed
2	Race Conditions Audit	-	Passed
3	Authority Control Audit	Permission vulnerability audit	Passed
		Excessive auditing authority	Passed
4	Safety Design Audit	Zeppelin module safe use	Passed
		Compiler version security	Passed
		Hard-coded address security	Passed
		Fallback function safe use	Passed
		Show coding security	Passed
		Function return value security	Passed
	Call function security	Passed	
5	Denial of Service Audit	-	Passed
6	Gas Optimization Audit	-	Passed
7	Design Logic Audit	-	Some Risk
8	"False Deposit" vulnerability Audit	-	Passed

9	Malicious Event Log Audit	-	Passed
10	Scoping and Declarations Audit	-	Passed
11	Replay Attack Audit	ECDSA's Signature Replay Audit	Passed
12	Uninitialized Storage Pointers Audit	-	Passed
13	Arithmetic Accuracy Deviation Audit	-	Passed

Audit Result : **Passed(Good)**

Audit Number : 0X002002250001

Audit Date : Feb 25, 2020

Audit Team : SlowMist Security Team

( **Statement** : SlowMist only issues this report based on the fact that has occurred or existed before the report is issued, and bears the corresponding responsibility in this regard. For the facts occur or exist later after the report, SlowMist cannot judge the security status of its smart contract. SlowMist is not responsible for it. The security audit analysis and other contents of this report are based on the documents and materials provided by the information provider to SlowMist as of the date of this report (referred to as "the provided information"). SlowMist assumes that: there has been no information missing, tampered, deleted, or concealed. If the information provided has been missed, modified, deleted, concealed or reflected and is inconsistent with the actual situation, SlowMist will not bear any responsibility for the resulting loss and adverse effects. SlowMist will not bear any responsibility for the background or other circumstances of the project.)

**Summary: This is a token contract that does not contain the tokenVault section. SafeMath security Module is used, which is a recommend approach. User can burn their tokens through burn function. The mintAgents can mint tokens without limit. During the audit, we also found the following risks:**

- 1. The isUpgradeAgent() function in UpgradeAgent contract always return true, even if its implement in the real UpgradeAgent return false, we suggest to change the UpgradeAgent contract to interface and not implement it**
- 2. The canUpgrade() function in UpgradeableToken contract always return true which make no sense in functions which use it to check the upgrade status**

**After feeding back with the project side, they confirmed they will not use the upgrade-related function so they would not upgrade the tokens.**
